AIVERSITY HACKATHON · DOMAIN 1 · FUTURE-READY WORKFORCE

AI Career Navigator

**Turn AI disruption into a personalized reskilling map —
matching today's workforce to tomorrow's roles, grounded in dated AI signals.**

Rotaract Club of Xiamen University Malaysia

Team [AlgorithmX]

AGENDA

What we'll cover

01

The Problem

AI is rewriting tasks, not jobs

02

Our Solution

Task impact · Role match · Learning plan

03

Product Walkthrough

3-step flow · Live demo

04

Intelligence & Impact

Dated signals · SDG mapping · Tech stack

01 · THE PROBLEM

AI is reshaping our world, forcing us to rethink our work and future.

Times are changing fast. Technology is shifting unpredictably.
Caught in endless anxiety, we struggle to find our way forward—
unsure of what it takes to transform, or where we truly belong.Nobody tells a person **which task is next, which adjacent role fits, and exactly what to learn.**

Source: WEF, *Future of Jobs Report 2025* (Jan 2025)

39%

of core skills expected to change by 2030

59%

of workers will need training by 2030

Few

existing tools connect task change, role fit and learning in one map

01 · THE PROBLEM

AI is changing jobs faster than people can plan

The gap is not awareness. It is knowing what to do next.

01 · SIGNAL

People hear that AI will change work, but generic headlines rarely explain what changes inside their own role.

02 · TRANSLATION

A job title hides dozens of tasks. Some tasks may automate, some may be augmented, and new tasks may emerge.

03 · ACTION

Without a mapped skill gap and realistic pathway, workers are left with uncertainty instead of a transition plan.

AI transition is the next workplace inequality.

Right now, AI career guidance is expensive: career coaches, upskilling bootcamps, and premium advisors are out of reach for most people. Without free, explainable tools, the gap between workers who can navigate AI change and those who can't will widen.

Our product is the bridge.

Free, dated guidance for early-career workers in Malaysia connects SDG 4, 5, 8, 9 and 10.

We don't just tell people AI is coming. We give them a concrete, dated, personalised way to meet it.

02 · OUR SOLUTION

Start narrow: early-career workers in e-commerce operations

A focused beachhead makes the AI analysis testable and the product measurable.

PRIMARY USER

Final-year students and early-career workers (0–3 years) entering or working in e-commerce operations.

Needs:

- Understand how AI affects today's tasks
- Identify adjacent roles
- Know which skills matter most
- Turn recommendations into a learning plan

WHY THIS GROUP

High exposure to repetitive digital tasks + high mobility across adjacent roles.

Starting role:

E-commerce operations (admin support: illustrative)

Potential transitions:
Data operations · AI content operations · Future scope: automation / growth

02 · OUR SOLUTION

From "what if AI takes my job?" to "here is exactly what to learn next."

TASK-LEVEL IMPACT

Rates each daily task by AI exposure vs. human judgment — not vague "automation risk."Empower human efficiency and maximize the use of resources.

ADJACENT-ROLE MATCH

Matches existing skills to real future roles with a transparent match score and skill gap.

DATED LEARNING PATH

Outputs a sequenced plan with real courses, hours, and weeks — tied to updatable AI signals.

02· OUR SOLUTION

The career transition loop

Evidence → diagnosis → decision → action

01

PROFILE

Role, tasks, experience, skills

02

SCAN

AI trends + dated reliable sources

03

MODEL

Task impact: automate / augment / emerge

04

MATCH

Adjacent roles + fit score

05

CLOSE GAP

Prioritised skills + learning plan

06

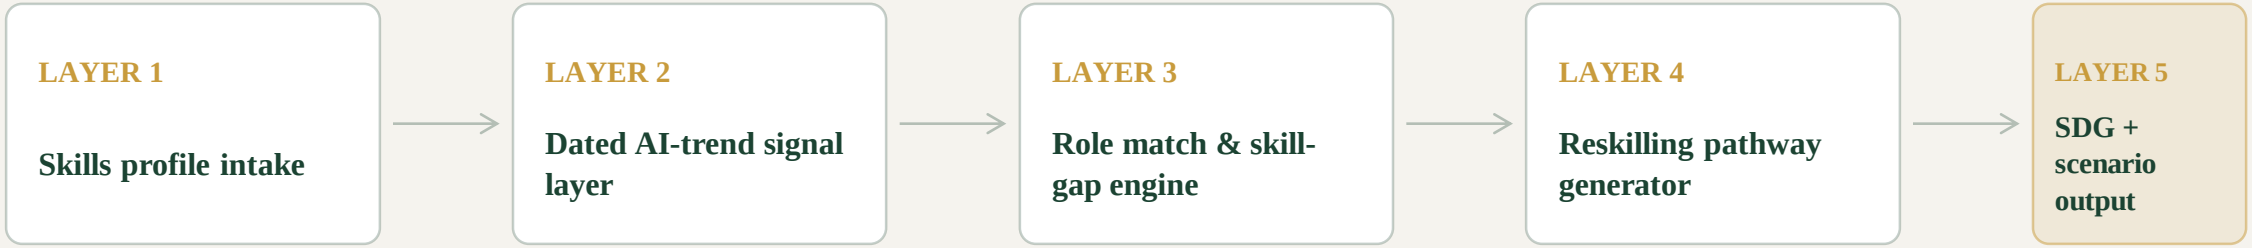

ADAPT

Scenario updates as AI signals change

02· OUR SOLUTION

A thin, transparent stack — no black box.

Five composable layers. Every recommendation can be traced back to its input and source.

Why this works for judges

Signal layer is updatable and dated — not trained once. Match score is explainable (skills hit / missing). User controls the scenario, not the model.

Current prototype

Working 3-step web flow, live role matching, dated source citations, scenario toggle, and SDG mapping — demonstrated in the product.

What's next

Versioned snapshot refresh, broader role taxonomy, and an employer-facing view.

Not just career advice — it's social impact.

Every recommendation in the product carries a visible link to the UN 2030 agenda.

4

Quality education

Dated reskilling maps and free learning resources turn skill gaps into structured learning.

5

Gender equality

Accessible guidance helps women and non-technical workers enter data and AI roles.

8

Decent work & economic growth

Workers move from routine e-commerce tasks into higher-skill digital roles.

9

Industry, innovation & infrastructure

Data, SQL and responsible AI skills strengthen digital operations.

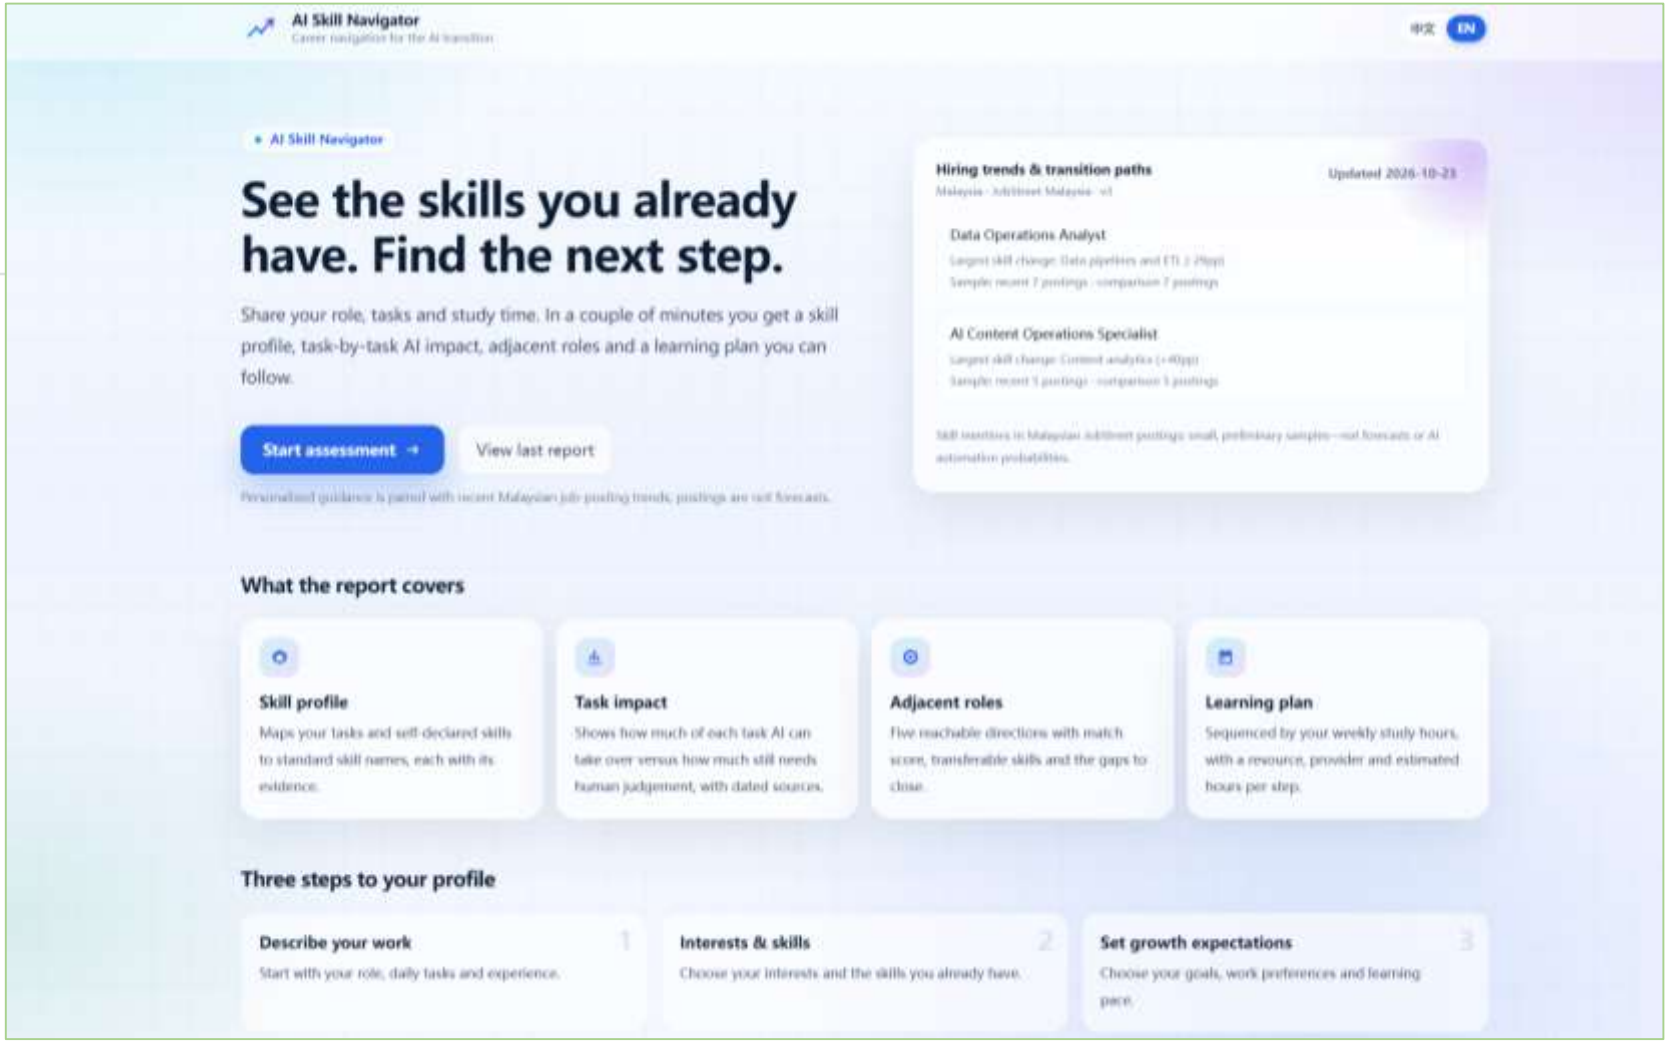

Also includes SDG 10: free guidance lowers barriers for non-specialists.

The landing page

Under 3 minutes. No login required to try.

What users get

- Skill profile from role, tasks & experience
- Task-by-task AI impact with dated sources
- Adjacent roles with match scores
- A week-by-week learning plan

03 · HOW IT WORKS

A 3-step guided flow

Under 3 minutes, no login required to try.

01 Profile your work

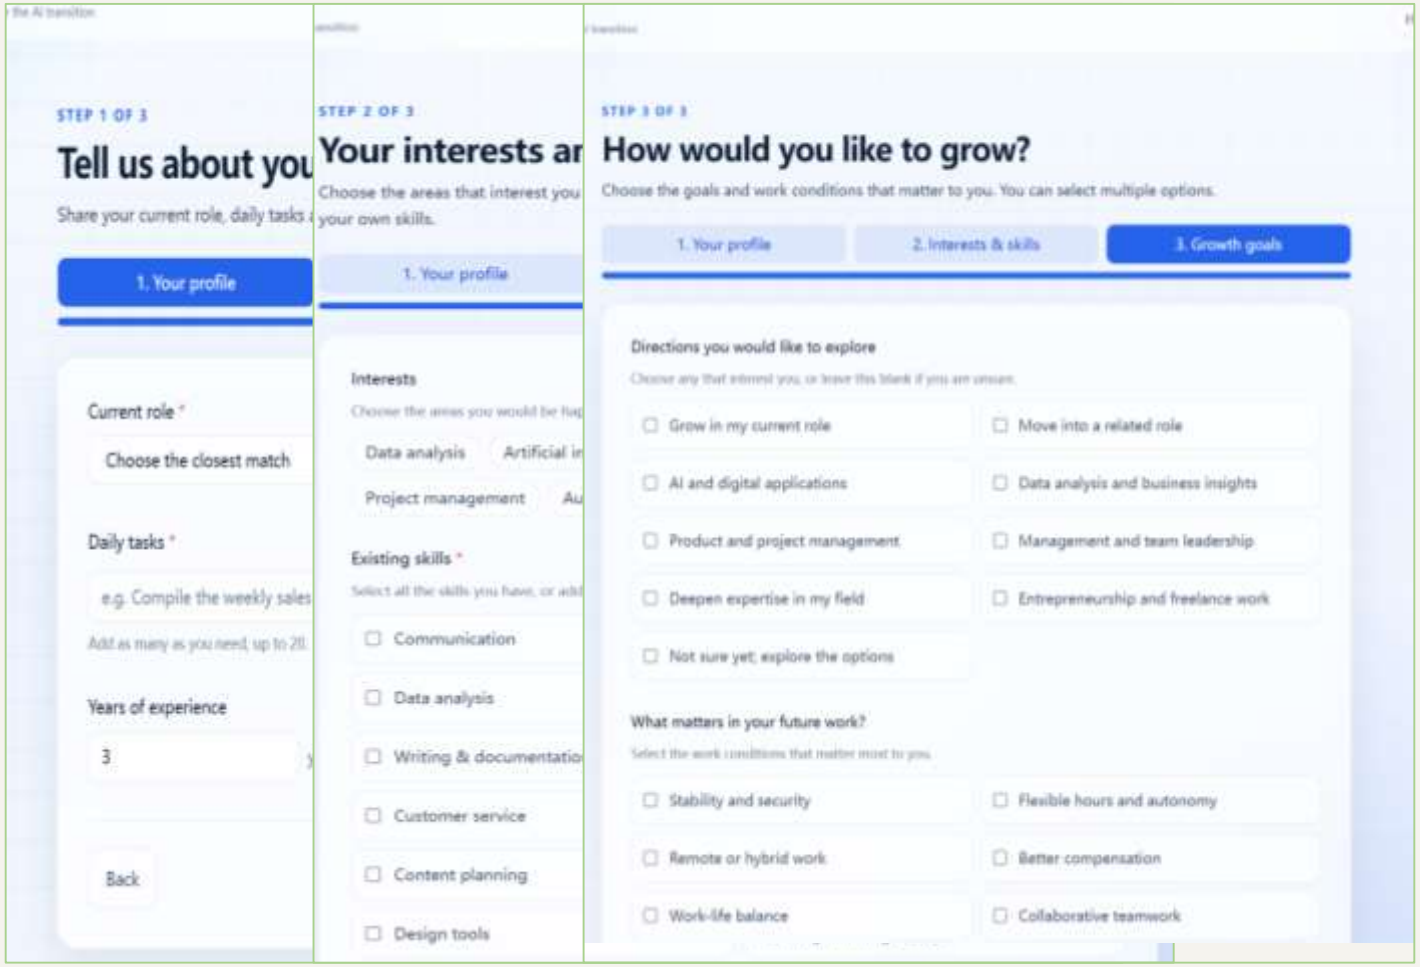

Current role, daily tasks, years of experience, interests, and skills.

02 Choose your scenario

Automation-first or human-centered AI. Both use a 6-week pathway.

03 Get your roadmap

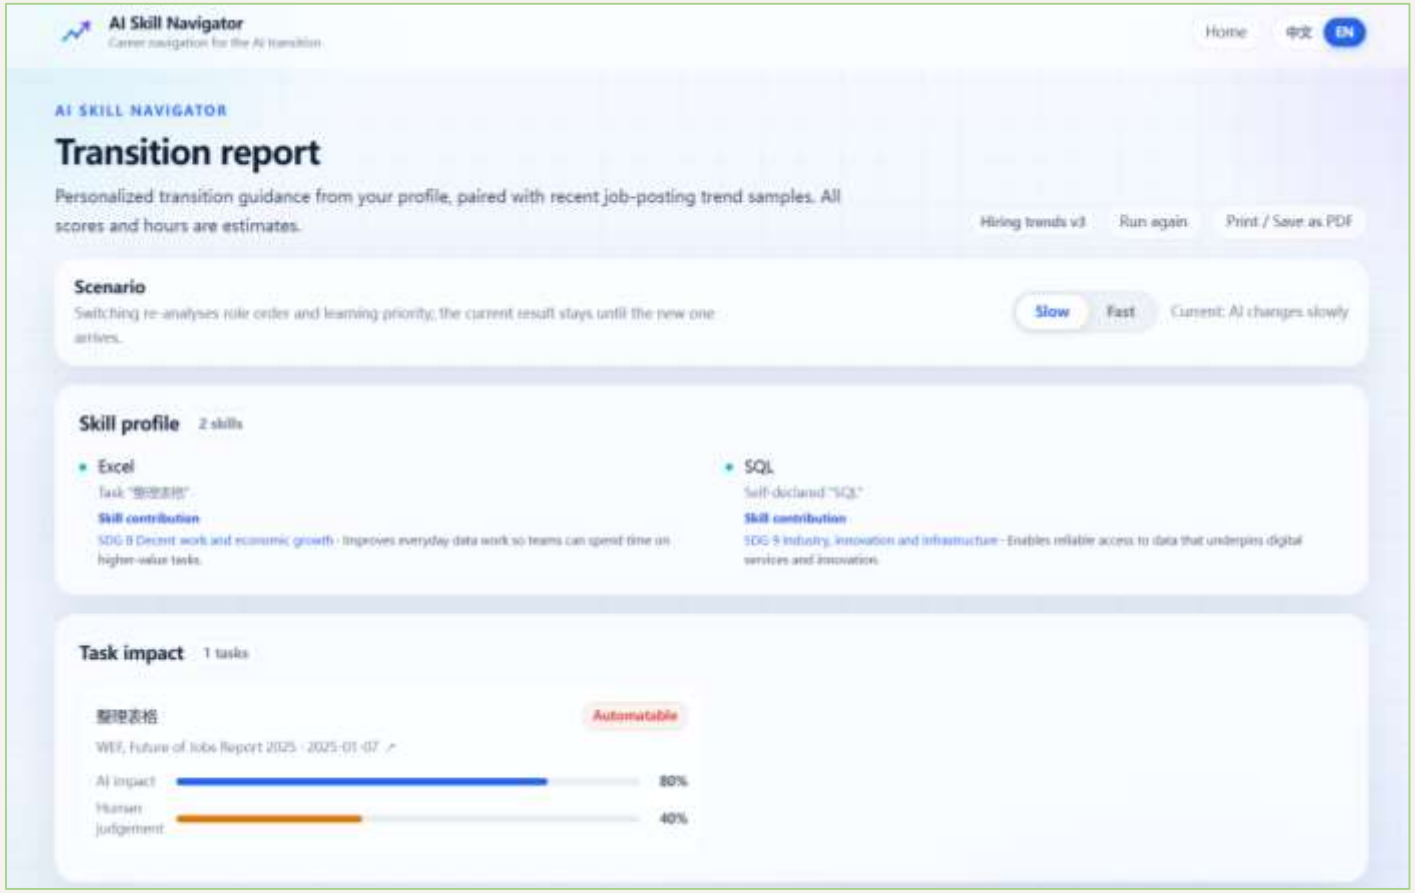

Task impact (illustrative), adjacent roles, skill gaps, and a week-by-week learning plan.

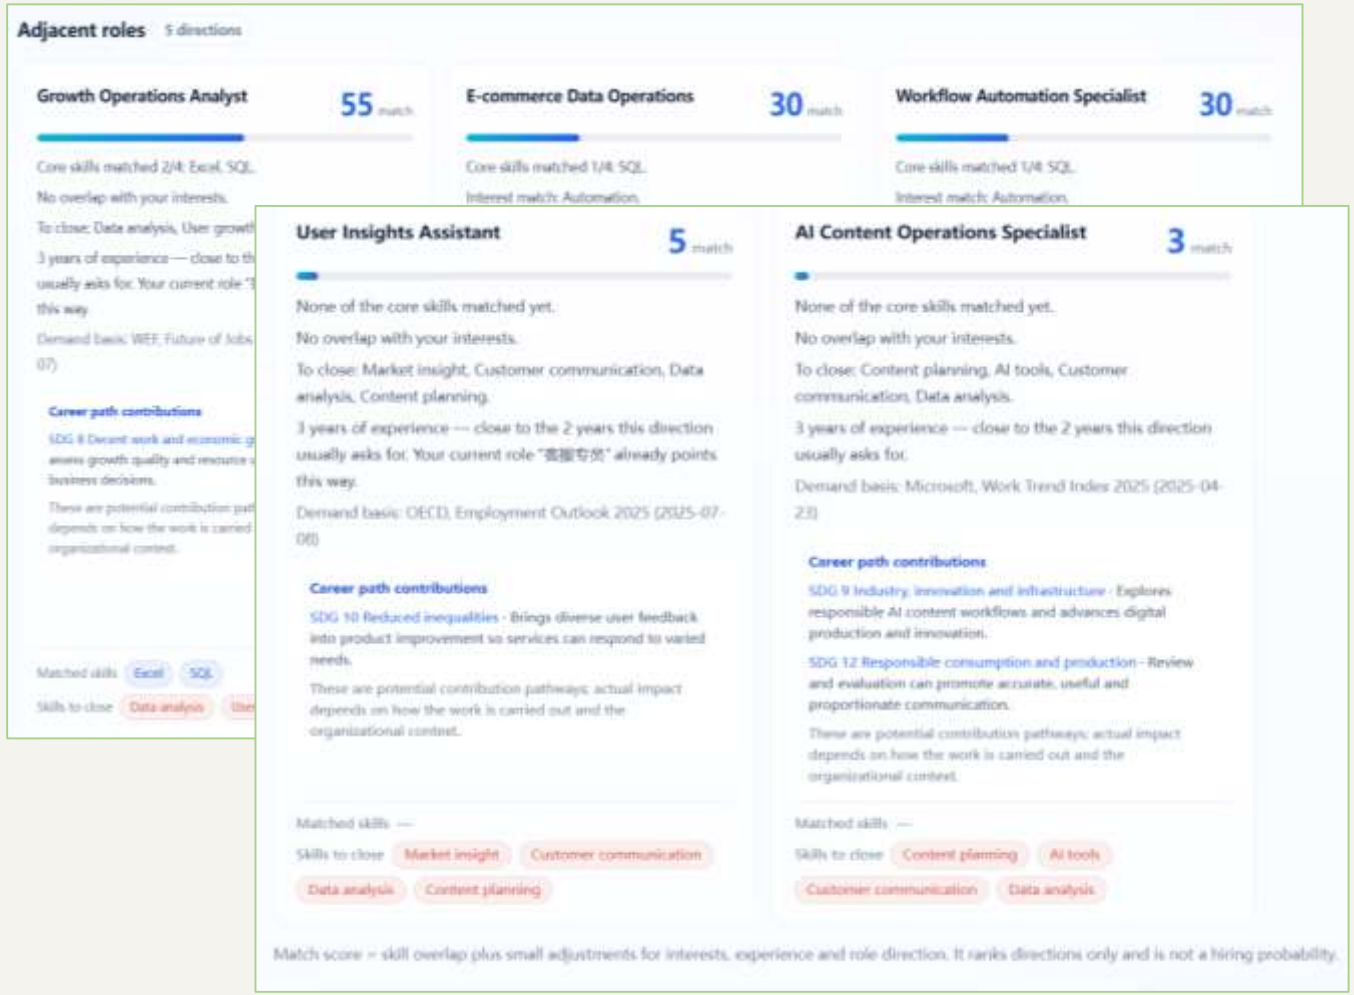

We break the job into tasks.

For every daily task the user enters, we show two dials: how much AI can do, and how much human judgment still matters. A task like **"organizing tables"** scores 80% AI exposure vs. 40% human judgment - illustrative.
This turns abstract anxiety into a concrete, actionable signal.

Source: WEF 2025; task score is illustrative, not v2/v3 data

Where can this person actually go next?

For a 3-year e-commerce operations executive, the engine surfaces v3 target roles:

60 Data Operations Analyst- gap: SQL, data visualization

46 AI Content Operations Specialist- gap: AI evaluation, brand safety

- Future scope: workflow automation- not in v2/v3

Sources: WEF 2025 · DOSM 2026 · JobStreet Malaysia (manual review)

Turn a recommendation into a ranked learning plan

Prioritise by role relevance, gap size, and transition value.

Data Analysis
HIGH · Core capability

Excel
HIGH · Immediate leverage

SQL
HIGH · Data-oriented roles

Python
RECOMMENDED · Automation pathway

Data Visualisation
HIGH · Communicate insights

AI Tools (cross-role)
MEDIUM · Illustrative

E-commerce Operations
MEDIUM · Domain foundation

Marketing Analytics
MEDIUM · Growth pathway

06 · FEATURE 3 — PERSONALIZED RESKILLING PLAN

Not "learn data science" — a dated, week-by-week plan.

From the skill gap, the engine picks real courses from public platforms, sequences them by priority, and commits to a total hours and a weekly cadence.

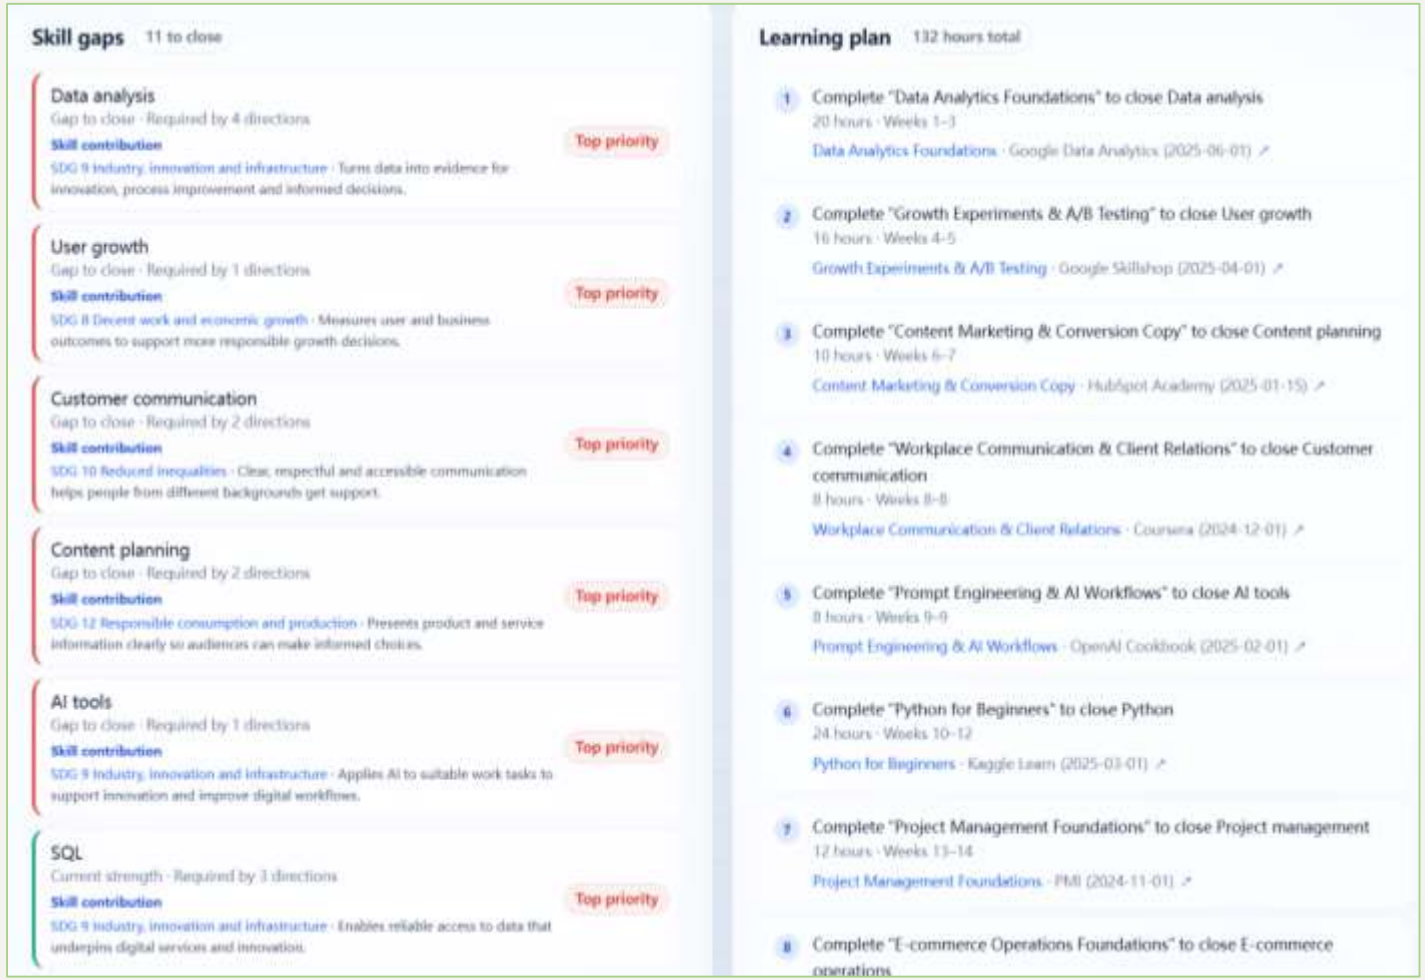

36h

total learning

6

weeks at 6h/week

Example stack: Data analysis, User growth, Customer communication, Content planning, tools, SQLs,etc.

We don't predict one future. We prepare for several.

The same role can go in different directions depending on how fast AI is adopted.

SCENARIO · HUMAN-CENTERED AI

AI penetration is gradual.

Strategy:

Deepen domain expertise while using AI to lift efficiency.

For:

People who want career stability.

SCENARIO · AUTOMATION-FIRST

AI rapidly enters daily work.

Strategy:

Prioritise automation, AI evaluation, data, and high-value decision-making.

The dated signal doesn't just sit on a page — it changes the ranking.

Concrete example: what happens when WEF 2025 says "Data pipelines and ETL" is declining.

① DATED SIGNAL

WEF Future of Jobs 2025
(Jan 2025)

"Data pipelines & ETL" largest skill change:−29ppfor Data Operations Analyst.

Cross-checked against JobStreet MY: 7 recent postings vs 7 comparison postings for the same role.

→

② ENGINE CHANGES

Re-weights the skill-gap score for this role:

- "Data pipelines & ETL" drops from HIGH priority gap to MEDIUM
- "Data Analysis" rises to top of the gap list
- Match score for Data Operations Analyst shifts:55 → 52
- Adjacent role ordering may re-rank

→

③ USER SEES

The reskilling plan changes:

- Drops an ETL course from week 8
- Promotes a Data Analysis course to week 3
- Total hours shift: 132h → 128h
- The dated source "WEF Jan 2025" stays visible next to the recommendation

Same user, same profile — different dated input produces a different plan. The link is visible, not hidden.

07 · INTELLIGENCE LAYER

Every recommendation traces back to a dated source.

Versioned snapshots are added when new dated evidence is available.

WEF — Future of Jobs Report	Skill outlook · global forecast · Jan 2025
DOSM — Labour Force Statistics	Malaysian labour-market context · Aug 2026
Malaysia Digital Economy Blueprint	Digital economy and workforce context · Feb 2021
JobStreet Malaysia · v3 snapshots	Manually reviewed postings · Period A and B · 2026

Why this matters:timeliness (AI changes fast), traceability (users and judges can verify), and localisation (global signals tied to Malaysian roles).

What our data actually looks like.

We show every sample size, date, and scope — so users and judges can see what's behind a recommendation.

Sample sources

Global trend reports

WEF Future of Jobs 2025 · DOSM Labour Force Statistics 2026

Malaysia Digital Economy Blueprint · JobStreet Malaysia

Dated local job postings

JobStreet Malaysia - manually reviewed snapshots

Example: Data Operations Analyst

recent 7 postings · comparison 7 postings

Scope & sample size

Geography:Malaysia (JobStreet MY)

Roles:early-career e-commerce operations, data operations and AI content operations

Posting samples:current 7/7, data 7/7, AI 5/5

Comparison baseline:7/7, 7/7, 5/5

Signal windows:A 2026-09-27–10-22; B 2026-08-02–09-26

Every report date is shown inline next to the score.

09 · DATA FRESHNESS

Two snapshots, not one frozen model.

Every trend score compares a recent sample against an earlier one — so you can see direction, not just a static number.

Recent sample

Period A · 2026-09-27 to 2026-10-22

Data Operations Analyst: 7 postings in Period A.

VS

Comparison sample

Period B · 2026-08-02 to 2026-09-26

Data Operations Analyst: 7 postings in Period B. Delta is shown in percentage points.

Why two dates?

Two dated samples show direction. v3 has 34 comparisons; 11 remain insufficient.

What we don't claim to do.

Being honest about the edges of this model is part of the product — not a footnote.

Small posting samples

Current 7, data 7, AI 5 postings per role. Initial-scale signals, not market shares; 11 of 34 comparisons insufficient.

Beachhead roles ≠ whole market

We start with early-career e-commerce operations. Admin support is an illustrative adjacent audience; senior target roles are not modeled.

Report lag

WEF, DOSM, and Malaysia Digital Economy Blueprint reports move at different cadences. The dated source tells users how fresh each signal is.

Match score ≠ hiring probability

The match number is skill overlap plus small adjustments for interests, experience, and role direction. It ranks directions only — it is not a prediction of getting hired.

How each feature drives measurable SDG impact

Dated reskilling map	→	**SDG 4**	Structured, dated learning plans turn skill gaps into verifiable learning.
Skill gap + learning plan	→	**SDG 8**	Workers move into higher-skill digital roles with decent-work pathways.
Personalised for non-specialists	→	**SDG 10**	Free, jargon-free guidance removes the degree gatekeeping and access gap that blocks mobility.
Inclusive data and AI skills	→	**SDG 9 · SDG 5**	Builds digital infrastructure while widening access for women and non-technical workers.

Don't make professionals guess the future.

Give them a path they can choose.

We turn fast-moving AI trends into explainable, personalised career actions — so people transition before change becomes a crisis.

Current role → Future role

Evidence → Role match → Skill gap → Reskilling
